

Unhealthy Indoor Air can have a Negative Impact on Resident Quality of Life and Employee Performance

50% of illnesses are caused or aggravated by poor indoor air quality.
– American College of Allergists

LONG-TERM CARE FACILITIES

Increase satisfaction and attract new business by removing harmful contaminants and unpleasant odors from the air. Odors may give potential residents and their families an unjustified perception that your facility is unkempt – and deterring future customers is costly to your business. The **Green Klean® Commercial Air Scrubber** provides a healthier and more comfortable living and working environment by improving indoor air quality. Aging adults, because of their low immune systems, are particularly at risk of the health problems associated with airborne pollutants, but staff and administrators are vulnerable as well. The Green Klean® Commercial Air Scrubber clears indoor air of more than 350 pollutants and odors, including those common to long-term care facilities.

LONG-TERM CARE FACILITIES

Certified nursing homes must comply with specific regulatory standards in order to receive payment under Medicare or Medicaid programs. These standards are focused on resident care, staff and resident interaction and the facility environment, which includes quality of life.

WARNING: Poor Air Quality is Harmful to Your Residents

People who are 65 years or older have weaker immune systems and are much more susceptible to the harmful effects of air pollutants. According to the U.S. Department of Health and Human Services' Administration on Aging, most older Americans have at least one chronic condition and many have multiple conditions. These conditions are further aggravated by the unhealthy particles and odors trapped in poor indoor air.

The aging population is equally more vulnerable to toxic gases like Volatile Organic Compounds (VOCs) because as we get older it becomes more difficult to eliminate chemicals from the body. VOCs come from the various chemical-based products used in long-term care facilities, including cleaning products, disinfectants, air fresheners, deodorizers, paints, sealants, wall coverings and adhesives.

Your Staff is Affected, too

Polluted air not only lowers the quality of living for your residents, it also affects the health and satisfaction of your employees. Consider the daily challenge of keeping up with displeasing odors from soiled clothing and bed linens, poor hygiene, infections, ailments, medications and other issues related to aging. In addition, the air quality in long-term care facilities is harmed by dust mites, mold spores, bacteria, viruses, allergens and even pet dander. These airborne pollutants are linked to the common cold, allergy and asthma attacks and sinus infections. Adequate ventilation and superior air filtration will assure you that the air in your facility is clean and fresh.

Restoring the Air

The Green Klean® Commercial Air Scrubber is the best way to clear the air of odors and some harmful illness-causing pollutants. The Green Klean® Commercial Air Scrubber helps you create an environment that is both more comfortable and healthier for the people living in and working at your facility. Healthier, odor-free air means better living conditions and happier residents and employees. Plus, your facility may improve its reputation and receive higher inspection scores to help your business grow!

COSTS TO YOUR BUSINESS:

- Bad Inspection • Poor Facility Rating
- Possible Citations (with Fines)
- Decreased Resident Satisfaction
- Damaged Reputation • Lost Customers
- Increased Employee Absenteeism
- Reduced Productivity • Lower Profits

Benefits of the Green Klean® Commercial Air Scrubber

- Provides a healthier environment with happier residents and employees, fewer missed days due to illness and increased productivity.
- Removes 99.98% of particles down to 0.1 micron – three times better than ordinary HEPA designs!
- Quickly eliminates many dangerous gases and particles, including allergens, mold spores, viruses, some bacteria, and VOCs and their related odors.
- Works around the clock to restore your air faster so residents, patients, employees, visitors and other occupants can breathe easier and feel healthier.

Air changes per hour:

- Low: 2 per hour**
- Medium: 4 per hour**
- High: 8 per hour**
